

Structherm | Fastbuild[®]

Helme Hall Care Home
Meltham

Client: Helme Hall Care Home
Sector: Healthcare

Building type:
Care Home

Project size:
557m²

Supply Package:
Fastbuild walls plus Hanson
150mm Hollowcore floors &
staircases

Build time:
3 weeks

Background:

The main section of Helme Hall is a mid 19th century country hall which has more recently been renovated and converted into a residential home caring for the elderly. As part of Helme Hall's ongoing growth and improvements an additional wing offering 23 bedrooms was built using Structherm's Fastbuild system, plus Hanson 150mm Hollowcore floors and staircases.

Why Structherm were chosen:

Due to the architecture of the existing building the area was protected under conservation regulations. This meant the new wing was required to be constructed in keeping with the design of the original building. Structherm's design process and Fastbuild system offered the ideal flexibility required to sympathetically aid this traditional design. Furthermore, although the Helme Hall extension did not go through the acoustic and thermal performance testing procedure, Structherm has gained an excellent reputation having previously completed a number of healthcare projects that have exceeded all the relevant care home and healthcare building regulations.

Testimonial:

"Without a doubt I wouldn't hesitate to use Structherm again for any future projects and would definitely recommend them for the design & build within the care sector. The excellent service, convenience, cost effectiveness and overall efficient project management of the building process made the construction of the new wing very easy. Throughout, Structherm were excellent."

**Patrick Hennessy, Managing Director,
Helme Hall Nursing Care Home**
