

Structherm | Fastbuild[®]

Harperley Hall

Durham

Sector: Keyworker &
Student Accommodation

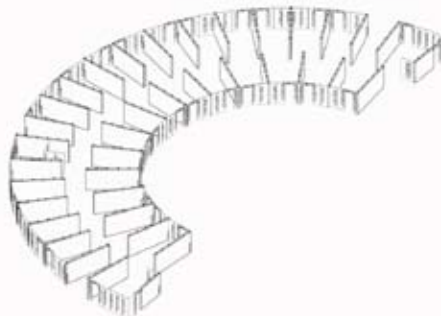

Client:
NPIA & Kier Northern

Building type:
3 storey residential/training
facilities

Project size: 2243m²

Supply Package:
Fastbuild walls, floors, stairs &
roof structure

Build time: 14 weeks

Background:

The site at Harperley Hall was acquired by NPIA, the National Police Improvement Agency, and has undergone a major redevelopment.

Part of the redevelopment includes a new residential and training centre (pictured here) a three storey curved building to reduce the visual impact within the Historical site.

The Fastbuild system had a tough design brief to meet. A tightly curved building meant that the panels had to deliver robustness and the acoustic performance required by the client under challenging circumstances.

The building incorporated the new fair faced panels (see below) which are ready for direct decoration, saving valuable time off the programme. Structherm completed the build in just 14 weeks.

Testimonial:

"This is the second time we have used Structherm, the latest system has shown significant developments in this period.

We were particularly impressed with Structherm's preparation of sample panels and willingness to discuss how required details and finishes could be achieved."
